PUBLICATIONS BY THE STAFF OF THE NATIONAL BUREAU OF STANDARDS

I. SCOPE OF ACTIVITIES

The principal activities of the Bureau in the field of electrodeposition are as follows:

1. Researches upon the fundamental principles of electrodeposition.

2. Studies upon the quality and value of electroplated coatings and the development of specifications for use by the Government and industry.

3. The development of special processes and equipment required by other branches of the Government, such as the War, Navy, and Treasury Departments.

4. Investigation of the methods of testing electroplated products and the solutions used in electrodeposition.

5. Testing of electroplated metals, such as hardware and plumbing fixtures, that are purchased by the Federal Government on specifications. (Tests are not made for the general public.)

6. Furnishing information to the Government and the public. Requests for information in this field that are not covered by the enclosed publications will receive careful attention.

In all the above activities the Bureau cooperates directly with other Government agencies and with appropriate technical organizations, such as the American Electroplaters' Society, the International Association of Electrotypes, and the American Society for Testing Materials.

II. SCOPE OF THIS LETTER CIRCULAR

The publications that are listed in this letter circular are divided into three parts.

A--Government publications on electroplating, principally from the National Bureau of Standards.

FS--Federal Specifications that include definite requirements for electroplated coatings. (In certain cases, individual agencies, especially the War and Navy Departments, have separate specifications to meet their particular needs. Information regarding such specifications may be obtained from the Office of the Quartermaster General, War Department, Washington 25, D. C.; or the Bureau of Supplies and Accounts, Navy Department, Washington 25, D. C.)

B--Papers from the National Bureau of Standards that were published in outside journals, files of which are available in many libraries.

In the first column, each paper is assigned a "reference number", purely for use in the index of this circular. This number should not be included in requests addressed to the Superintendent of Documents, but only the "serial number" and title.

For convenience, a list "C" is added, of journals and books printed in the English language, that contain information on electrodeposition.

The index contains reference to the principal subjects covered in lists A, FS, and B.

### III. PUBLICATIONS

#### Government Publications:

List "A" includes in chronological order those papers published by the Government. Where the price is stated in the extreme right-hand column, the publication can be purchased from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. The prices quoted are for delivery to addresses in the United States and its territories and possessions and in certain foreign countries which extend the franking privilege. In the case of all other countries one-third of the cost of the publication should be added to cover postage. Remittances should be made either by coupons (obtainable from the Superintendent of Documents in sets of 20 for \$1.00 and good until used), or by check or money order payable to the "Superintendent of Documents, Government Printing Office" and sent to him with order. Letter Circulars are obtainable, without charge, from the Bureau. Publications marked "OP" are out of print. Files of the Government publications will be found in the larger libraries.

The explanation for the serial letters used for designating the separate papers of the Bureau is as follows:

RP = "Research Paper". These are reprints of articles appearing in the "Bureau of Standards Journal of Research" (BS J. Research) and the "Journal of Research of the National Bureau of Standards" (J. Research NBS), the latter being the title of this periodical since July 1934 (vol. 13, number 1).

S = "Scientific Paper" of the National Bureau of Standards. From Nos. 1 to 329, inclusive, the separate papers of this series were known as reprints from the "Bulletin of the Bureau of Standards" (Bul. BS). Subsequently, from Nos. 330 to 572, the separates were known as reprints from the "Scientific Papers of the Bureau of Standards" (Sci. Pap. BS). This series was superseded by the "Bureau of Standards Journal of Research" in 1928.

T = "Technologic Paper" of the National Bureau of Standards. Nos. 1 to 202 were issued each independent of the other with individual pagination. Later they were assembled to make the first 15 volumes of this series, and subsequent separates were given volume pagination. (Tech. Pap. BS). This series was superseded by the "Bureau of Standards Journal of Research" in 1928.

C = "Circular" of the National Bureau of Standards.

LC = Mimeographed "Letter Circular of the National Bureau of Standards".

PHR = Public Health Reports, issued by the U. S. Public Health Service, Federal Security Agency.

### BOOKS

Among the books in English on electrodeposition, in chronological order, are:

Electrodeposition of metals. G. Langbein and W. T. Brannt, (Henry Carey Baird and Co., 8th Ed., 1920)

Practical electroplating, (5th Ed., 1923) W. L. D. Bedell

Modern electroplating. W. E. Hughes, (Oxford Technical Publications, 1923)

The chemical coloring of metals. S. Field and S. R. Bonney, (Chapman and Hall, Ltd., 1925)

Electroplating with chromium, copper and nickel. D. Freeman and F. G. Hoppe, (Prentice-Hall Co., 1929)

Electroplating. S. Field and A. E. Weill, (I. Pitman and Sons, Ltd., 1930)

Chromium plating. E. S. Richards, (J. B. Lippincott Co., 1932)

Chromium plating. O. Bauer, H. Arndt and W. Krause, English translation by E. W. Parker, (Edward Arnold and Co., 1935)

Modern Electroplating, Compilation, The Electrochem. Soc., N. Y. 1942

Principles of electroplating and electroforming, W. Blum and G. B. Hogaboom, (McGraw-Hill Book Co., 3rd Ed., 1949)

IV. INDEX

In the following list, each publication is referred to by the reference number, by which it is listed in the first column in the preceding pages of this circular, in which are given explicit references, and directions for ordering Government publications.

Accelerated tests	22, 25, 29
Adhesion of electrodeposits	342
Alloys, nickel and cobalt with phosphorus	43, 399
Alternate-deposits	306
Anodes	
Chromium plating	4
Nickel	316
Base metal, effect on structure of deposits	311
Black nickel plating	2
Brass, protection by	
Nickel	32
